

**In the Abstract:**

Please amend the Abstract as follows:

The present invention relates to a beam optical component including a charged particle lens (1;~~1000~~) for focusing a charged particle beam-(3), the charged particle lens (1;~~1000~~) comprising a first element (5;~~1005~~) having a first opening (7) for focusing the charged particle beam-(3); a second element (9;~~1009~~) having a second opening (11)~~for focusing the charged particle beam-(3)~~; and first driving means (13) connected with at least one of the first element (5;~~1005~~) and the second element (9;~~1009~~) for aligning the first opening (7) with respect to the second opening (11). With the first driving means, the first opening (7) and the second opening (11) can be aligned with respect to each other during beam operation to provide a superior alignment of the beam optical component for a better beam focusing ~~focussing~~. The present invention also relates to a charged particle beam device that uses said beam optical component for focusing ~~focussing~~ the charged particle beam-(3), and a method to align first opening (7) and second opening (11)-with respect to each other.
